

Data Overview

The dataset used for this project is the **Netflix Titles Dataset**, which contains comprehensive information about movies and television shows available on Netflix. It includes metadata such as title, content type, director, cast, country of origin, release year, date added to Netflix, content rating, duration, genres, and descriptions. This dataset is widely used for exploratory data analysis, recommendation systems, and content trend analysis because it provides detailed information about Netflix's streaming catalog.

The dataset consists of **8,807 records** and **12 attributes**, where each record represents a unique Netflix title. The attributes comprise both categorical and numerical data, enabling various forms of statistical analysis and visualization. While several columns contain missing values—particularly in **Director**, **Cast**, **Country**, **Date Added**, and **Rating**—the dataset remains sufficiently rich for meaningful analysis after appropriate preprocessing.

Dataset Quantity

Attribute	Value
Dataset Name	Netflix Titles Dataset
Source	Kaggle
Total Records (Rows)	8,807
Total Attributes (Columns)	12
Numerical Columns	1 (Release Year)
Categorical/Text Columns	11
Duplicate Records	0 (before preprocessing)
Missing Values	Present in Director, Cast, Country, Date Added, and Rating
Dataset Type	Structured Tabular Dataset
File Format	CSV

Attribute Description

Attribute	Description
Show ID	Unique identifier assigned to each Netflix title.
Type	Specifies whether the content is a Movie or TV Show.
Title	Name of the movie or television show.

Attribute	Description
Director	Director(s) of the content.
Cast	Main actors and actresses featured in the content.
Country	Country where the content was produced.
Date Added	Date when the title was added to Netflix.
Release Year	Original year in which the content was released.
Rating	Audience maturity rating assigned to the content.
Duration	Running time of a movie or the number of seasons for a TV show.
Listed In	Genre or category assigned to the content.
Description	Short synopsis describing the content.

Data Characteristics

- **Dataset Type:** Structured, tabular data.
- **Primary Entity:** Netflix movies and TV shows.
- **Content Types:** Movies and TV Shows.
- **Feature Types:** Categorical, textual, and numerical.
- **Temporal Information:** Available through *Date Added* and *Release Year*.
- **Primary Use:** Data preprocessing, exploratory data analysis (EDA), visualization, trend analysis, and machine learning applications such as recommendation systems and content classification.
